CLAIMS

1. A functionalizable polymer of the formula I:

5

 $HO = \begin{bmatrix} 0 & & & \\ R_1 & & & \\ R_2 & & & \\ A & & B \end{bmatrix}_{X}$

10

wherein:

15 Z is -O- or -NH-:

R₁represents a non-functional backbone of a hydroxy acid or amino acid derived from a cyclic ester or diester or cyclic amide or diamide monomer (A);

R₂represents a non-functional chain derived from an epoxide monomer (B), said chain ending with a graftable hydroxy or carboxylic group;

20 n is the number of units derived from the monomers (A);

m is the number of units derived from the monomers (B); and

x is equal to n+m;

the ratio m/x ranging from 0.005 to 0.30.

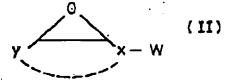

- 25 2. The functionalizable polymer of formula I as claimed in claim 1, wherein R1, R2, n, m and x are selected so that the average molecular weight of the polymer ranges from 1,000 to 50,000.
- The functionalizable polymer of formula I as claimed in claim 1 or 2,
 wherein Z is -O- and the monomer A is selected from the group consisting of lactones, dioxanones and dioxanediones.

17

10 / 510407 DT04 Rec'd PCT/PTO 0 5 OCT 2004

- 4. The functionalizable polymer of formula I as claimed in claim 3, wherein the monomer A is selected from the group consisting of caprolactone, glycolide, dilactide and glycolic lactide.
- 5. The functionalizable polymer of formula I as claimed in claim 1 or 2, wherein Z is -NH- and the monomer A is selected from the group consisting of lactams and dilactams.
- 6. The functionalizable polymer of formula I as claimed in any one of claims 1 to 5, wherein the monomer B is selected from the group consisting of the epoxides of formula II:

15

25

30

wherein:

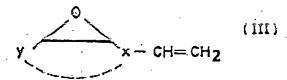

X is a non-functional chain optionally containing one or more heteroatoms but no ester or amide link;

Wis - CH₂CH₂OH or -CH₂COOH; and

20 Y is H, alkyl or phenyl;

X and Y being optionally linked to each other as shown in dotted lines.

- 7. The functionalizable polymer of formula I as claimed in any one of claims 1 to 5, wherein the monomer B consists of alkyl glycidyl ether.
- 8. A process for preparing a functionalizable polymer of formula 1 as defined in any one of claims 1 to 7, comprising the steps of:
- a) reacting at least one monomer A as defined in claim 1, 3 or 4 with at least one epoxide of formula III

WO 03/087189

5

10

15

20

25

wherein X and Y are defined as in claim 6, in the presence of a catalyst;

- b) subjecting the polymer obtained in step a) to an oxidation to convert the -CH=CH₂ groups into corresponding -CH₂CH₂OH groups; and
- c) optionally subjecting the polymer obtained in step b) to another oxidation with a Jones mixture to convert the -CH₂CH₂OH groups into corresponding -CH₂COOH groups.
 - 9. The process of claim 8, wherein:
- step a) is carried out with a tin catalyst at a temperature higher than 100°C under inert atmosphere.
 - 10. The process of claim 8 or 9, wherein: step b) is carried out under mild oxidation conditions.
 - 11. The process of claim 10, wherein: step b) is carried out by hydroboration at low temperature.
- 12. The process of any one of claims 8 to 11, wherein the polymer obtained after each of the steps a) to c) are recovered and purified prior to being subjected to the next step.
- 13. A functionalized polymer consisting of a functionalizable polymer of the formula I as claimed in any one of claims 1 to 7, or prepared by the process as claimed in any one of claims 8 to 12, to the graftable hydroxy or carboxylic groups of which has been grafted a compound selected from the group consisting of:

ligands specific to cellular receptors;

lipids;

30 peptides;

polyethers;

polyacrylates;

natural polymers; polyosides; antigens or antibodies; salen; and

5 cyclodextrins.

14. The functionalized polymer of claim 13, wherein the compound grafted to the polymer of formula II is a biomedically or pharmaceutically active substance.

10

- 15. The functionalized polymer of claim 14, wherein the compounds grafted to the polymer of formula I is a ligand specific to Selectine E.
- 16. The functionalized polymer of claim 13 or 14, which is in the form of nanospheres to facilitate delivery of the active substance.
